

## Keep the Internet Open — and Innovating

The Internet is a force for innovation, openness, and economic growth.

That's because government has consistently declined to tax and regulate it. This "hands-off" approach works for business and consumers alike.

Whenever there have been calls for government regulation, the Internet industry has consistently stepped up to resolve the issue without the need for government intervention.

But some are trying to lock up the Internet. They want government to adopt onerous and unnecessary regulations to impose what's being called "net neutrality."

Instead of letting consumers determine what services and products they want, "net neutrality" advocates want government to pick the winners and losers.

This kind of regulation will only derail the deployment of high-speed networks, stymie innovation, and sink the Internet into a morass of legal battles.

We need to ensure that everybody enjoys the openness and innovation the Internet provides today. The only way to do that is to keep the Internet unlocked — and free of regulation.

**The Net is Already Neutral —  
Congress Doesn't Need to Regulate It.**
